

Challenge : GITHUB

Category : Forensics

Author : Paul [@cyberpj](#)

Solution :

1. After unzipping the github.zip , there is was lots of folder and files

- **Don't get into rabbit hole like**
 - `diff or git -show or git logs. :)`
- **BE BEGGINER !**
- The flag Was Splitted into several pieces

2. *Just Enum the folder*

- First Part : /github/logs/refs
 - `TamilCTF{`
- Second Part : /github/logs/refs/heads
 - `i_d0nt_`
- Third Part : /github/branches
 - `kn0w_4b0u7`
- Fourth Flag was protected by the Password
- **[The Password Was Stored In "config" File]**
 - `cat config |tail`
 - `["last one pwd=tamilctf2021"]`
- Yeah ,

```
└─(p4ul@none)-[~/ctf/tamil-ctf/github/]
└─$ unzip -P "tamilctf2021" index.zip
Archive : index.zip
extracting:index
```

- Cat The *index* , It contains the last part
 - `_g!7_:(`
- **github/** contain a file '}' was the Ending Part :)
- That's all ,**Flag Formed**
- `flag : TamilCTF{i_d0nt_kn0w_4b0u7_g!7_:(}`

Thank You

By **TAMILCTF TEAM**
